

Scenario: You work several jobs and have been diagnosed with chronic dehydration. You have downloaded an app to help you keep track of your water intake.

Task 1: You drank a 16 fl oz glass of water. Add it on the app.

Task 2: Check the leaderboard.

Task 3: Change your daily goal to be 100 fl oz per day.

Notes:

- 1) What are some changes I would make to the app?
 - a) People had trouble navigating because they could only see forward and back one screen at a time, so add a way to see more than one screen away at a time.
 - b) Your "self" is on the friends list and it shows your actual name instead of saying "you" which the users found awkward.
 - c) The leaderboard looks very bland. It could use more variety in the leaderboard.
- 2) What are some things I would keep the same for the app.
 - a) Everyone enjoyed how easy it was to submit information and add personal content to the app.
 - b) Everyone liked being able to see everyone's comments.
 - c) Everyone enjoyed the indicator at the top showing the percentage to the daily goal.
